Stakeholder Insights & Performance Dashboard

Finance & Stakeholder Analysis | Tableau Project Report

Prepared from the supplied Finance record workbook and dashboard screenshot.

Source Data Profile	Value
Excel sheet used	Finance Sheet
Rows	9,999
Columns	18
Missing cells	0
Exact duplicate rows	0
Workbook worksheets	0

Dashboard values below are transcribed from the supplied screenshot and are not independently recalculated from the Excel source.

1. Overview

This Tableau project presents stakeholder and financial-performance indicators in an interactive dashboard. It covers premium, equity value created, insurer performance, premium trends over time, profitability by city and tenure, assets under management by stakeholder group, stakeholder distribution, and cost ratios versus profitability.

Project objective: provide a consolidated view of key stakeholder and finance measures for comparison across city, gender, date, stakeholder type, assets under management, premium, and profitability.

2. Dataset

The supplied Excel workbook contains 2 sheet(s). The largest sheet selected for profiling is **Finance Sheet**, with **9,999 rows** and **18 columns**. Profiling found 0 missing cell(s) and 0 exact duplicate row(s). These describe the source as provided; no rows were removed or imputed for this report.

3. Tools & Files

• Tableau workbook (.twb) for dashboard structure and visual analysis
• Microsoft Excel workbook (.xlsx) as the data source
• Dashboard screenshot for visual reference
• PDF report for documentation and sharing

4. Analysis Workflow

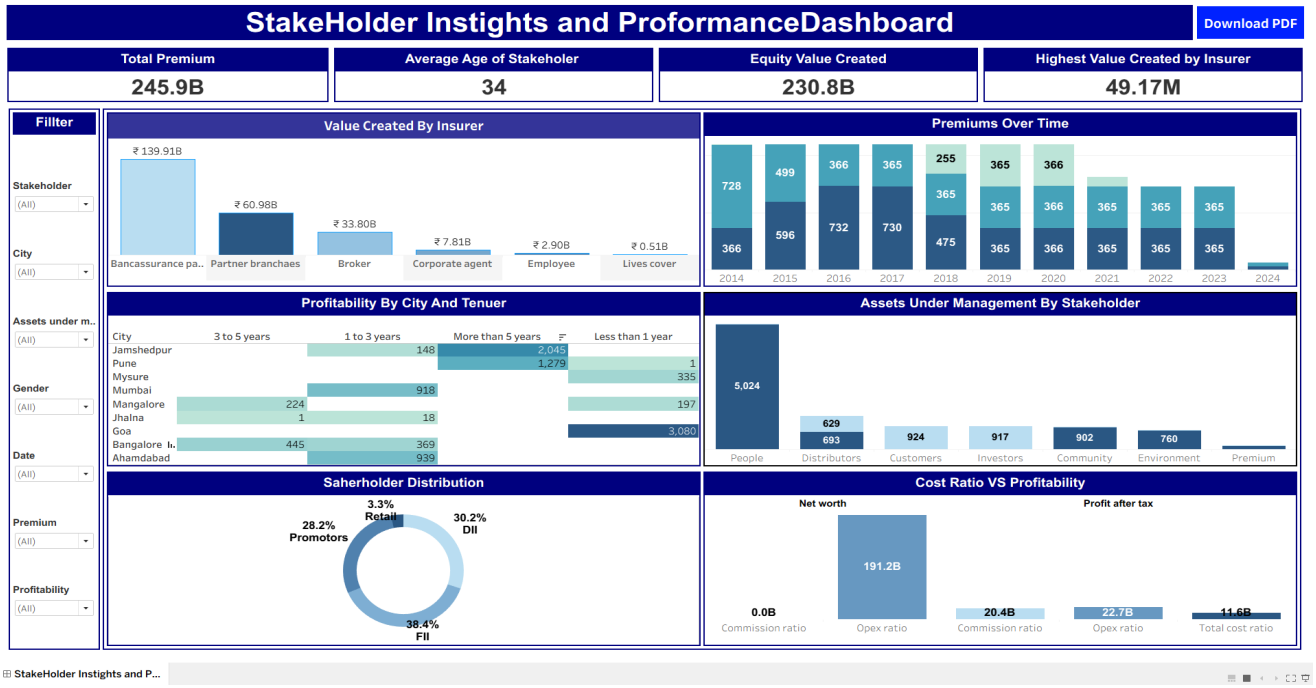

1. Load source data: Inspect the sheets and fields in Finance record.xlsx.
2. Review data quality: Check missing cells, duplicates, and field formats.
3. Connect Tableau: Reconnect the Excel source if Tableau prompts for it.
4. Review KPI cards: Inspect total premium, average stakeholder age, equity value created, and highest value created by insurer.
5. Explore breakdowns: Compare insurer value, premiums over time, city/tenure profitability, assets under management, stakeholder distribution, and cost ratios.
6. Use filters: Filter by stakeholder, city, assets under management, gender, date, premium, and profitability.
7. Document findings: Validate dashboard numbers and note relevant trends.

5. Dashboard Summary

Headline KPIs displayed in the supplied screenshot:

KPI	Displayed value
Total Premium	245.9B
Average Age of Stakeholder	34
Equity Value Created	230.8B
Highest Value Created by Insurer	49.17M

Dashboard Preview

Screenshot supplied by the project owner; values are preserved as displayed.

Dashboard visuals

- Value Created By Insurer — compares value created across channels.
- Premiums Over Time — displays annual premium values.
- Profitability By City And Tenure — compares values across city and tenure categories.
- Assets Under Management By Stakeholder — compares stakeholder groups.
- Stakeholder Distribution — shows the distribution across stakeholder categories.
- Cost Ratio VS Profitability — presents cost-ratio and profitability measures.

6. Results & Interpretation

The screenshot reports total premium of 245.9B, average stakeholder age of 34, equity value created of 230.8B, and highest value created by insurer of 49.17M. The charts provide multiple ways to compare stakeholder groups and financial indicators.

The screenshot does not provide all calculation definitions or underlying chart data. Interpret the metrics using the definitions and filters in Tableau; no causal conclusions are inferred from the displayed comparisons.

7. Business Use

- Compare value created across insurer channels and stakeholder groups.
- Review annual premium patterns for periods requiring further investigation.
- Explore city and tenure combinations associated with different profitability values.
- Compare assets under management by stakeholder group.
- Monitor cost ratios alongside profitability and validate unexpected values.

8. How to Run

1. Keep *Finance record dashboard.twb* and *Finance record.xlsx* accessible.
2. Open the TWB file in Tableau Desktop.
3. If prompted, select *Finance record.xlsx* as the data source.
4. Refresh the data and confirm the sheets and dashboard load.
5. Use the left-side filters to explore stakeholder, city, assets under management, gender, date, premium, and profitability.
6. Verify KPI definitions and units before sharing.

9. Project Files

- Finance record.xlsx — source data
- Finance record dashboard.twb — Tableau workbook
- Stakeholder_Insights_Finance_Report.pdf — project report

Skills Demonstrated

Tableau dashboarding • Excel data handling • KPI reporting • Stakeholder analysis • Financial visualization • Data quality profiling • Business reporting
